Site Historic Environment Assessment for Strategic Assessment of Land Availability (SALA)

Shona Robson-Glyde

HA21 Land Between Canal and Bristol Road

1. Background

1.1 Location

This site historic environment assessment consists of HA21 Land Between Canal and Bristol Road located within the Wards of Moreland and Podsmead within the wider boundary of Gloucester City (Fig 1). The HA21 site is in two sections to the north and south of Griggs Timber Yard, Bristol Road. The section to the north consists primarily of light industrial buildings to west of Bristol Road and the east of the Gloucester and Sharpness Canal. The retail park off St Ann Way bounds the site in the north and Griggs Timber Yard bounds it in the south. Madleaze Road crosses the site in the north. The southern section of the HA21 site consists of a narrow strip of land running along the edge of the canal. It contains light industrial buildings and is bounded on the east by the Bristol Road. The south of the site is bounded by the Bristol Road, A38 and A430 junction with Griggs Timber Yard in the north.

1.2 Site Visits

Site visits were undertaken in August 2016. Photographs of the site have been reproduced in this document as Plates 1-10. Archaeological information, historic maps and plans have also been reproduced as Figs 2-5.

1.3 Topography, Geology and Land Use

The site encompasses an area of 25.29 hectares (Fig 1) and is centred on NGR SO 8232 1709. It lies at a height of 13.0m AOD in the north and 12.0m AOD in the south.

The underlying bedrock is ‘Blue Lias Formation And Charmouth Mudstone Formation (Undifferentiated)’ (BGS 2015). This is a sedimentary bedrock formed approximately 183 to 204 million years ago in the Jurassic and Triassic Periods. These rocks were formed in warm shallow seas with carbonate deposited on platform, shelf and slope areas. This bedrock is overlain by superficial deposits of ‘Tidal Flat Deposits of Clay, Silt And Sand’ (ibid). The soils overlying the area are a ‘Clay to Silt’ type (UKSO 2015).

The site is currently, at the time of writing, used for light industrial and retail use with a number of rows of houses located along the eastern edge on Bristol Road.

1.4 Site Constraints

A table detailing all the designated and undesignated assets within and in the area of the site is included in Appendix 1.

There are no scheduled monuments or listed buildings contained within the site. The closest listed buildings are 73 to 91 Bristol Road (Norfolk Buildings) (NHLE1245993) and lie only 30 metres away from the eastern boundary of the site. The closest scheduled monument is Llanthony Secunda Priory
(NHLE1002091), 220m to the north of the site. The HA21 site is not part of a registered park or
garden or a battlefield. It is also not within a conservation area.

Given the size of the HA21 site, it is understandable that a considerable planning history exists for
parts of the site. This planning history can be obtained from Gloucester City Council.

2. Assessment

2.1 Archaeology, Built Heritage and Settings

A search of the Gloucester City Council Historic Environment Record (HER; GUAD numbers) for
the site and its surrounding area revealed a number of records relating to the buried archaeology of
the area around and within the HA21 site. This was enhanced by a search of records included in the
National Heritage List for England (NHLE) and the National Monuments Record (NMR). The
relevant records are shown on Figures 2 and 3 and discussed below.

2.1.1 Previous Assessments

A number of previous assessments have been carried out in the area of the HA21 site. A desk-based
assessment covering a large area along the canal corridor (GUAD1723) revealed potential for
palaeoenvironmental, prehistoric, Roman, medieval and post-medieval remains. A number of
assessments were produced in advance of the Gloucester Quays development. The land adjacent to
the Gloucester and Sharpness Canal was the subject of a desk-based assessment (GUAD1937) which
showed potential for medieval archaeology but was unlikely to have Roman and Anglo-Saxon
remains. A further desk-based assessment of the urban regeneration of Gloucester Quays
(GUAD1989) detailed the history of the area including the Llanthony Secunda Priory site. Two more
desk-based assessments detailed the urban regeneration (GUAD2013) and the cultural heritage
(GUAD2068) of the Gloucester Quays area. GUAD2013 summarised the archaeological and
historical background of the area whilst GUAD2068 was an assessment of the built environment of
the Quays area.

A desk-based assessment of Monk Meadow (GUAD1660) revealed that there was surviving medieval
ridge and furrow but that the area was mainly disturbed ground. The MOD Fuel Pumping Station was
the subject of a desk-based assessment (GUAD1647) which concluded that there was high potential
for medieval and Roman remains within the area. On Tuffley Crescent a desk-based assessment
(GUAD1982) concluded that there was limited archaeological potential although Romano-British
coins, a Roman road and a medieval moat were close to the area. A desk-based assessment at
Gloucester City Football Club (GUAD2002) revealed that the area had been agricultural land since
the medieval period with little evidence for archaeological activity prior to this. At Bristol Road
another desk-based assessment (GUAD2100) concluded there was little potential for the survival of
archaeological deposits.

At 26 Hempstead Lane the desk-based assessment (GUAD2160) revealed that there was potential
for palaeoenvironmental and Roman remains and ridge and furrow. The Newark Farm, Hempstead
desk-based assessment (GUAD2184) showed evidence of Roman settlement and burials and
medieval earthworks along with listed buildings, a scheduled monument and an historic farmstead
within the area. A desk-based assessment at Hempstead (GUAD2222) revealed surviving ridge and
furrow and potential for pre-medieval remains. A desk based-assessment for Land at Rea Bank
(GUAD2257) showed that there was potential for prehistoric or Roman seasonal wetland
exploitation and also historic field boundaries, ridge and furrow and drainage ditches within the area
of the site. Desk based assessment of the former Gas Works (GUAD2180) revealed potential for Roman and later agricultural evidence but that the area had been considerably impacted by the gas works. At Calton Road the desk-based assessment (GUAD2279) showed that there was potential for the presence of buried archaeological remains of Romano-British and post-medieval to modern date.

A geophysical survey on land east of Hempstead (GUAD1645) revealed ridge and furrow and a trackway. The Secunda Way geotechnical assessment (GUAD2104) showed that there was extensive made ground overlying natural clay.

2.1.2 Prehistoric, Roman and Saxon Archaeology

There are no recorded prehistoric sites in the area around the HA21 site. There are, however, a large number of Romano-British records within the area of the site.

Along both sides of the Bristol Road there have been stray finds recovered including a number of coins. At 69 Granville Street (GUAD1143) a dupondius of Domitian dating from the late 1st century AD was found. Close to this at 38 Granville Street (GUAD1142) an as of Germanicus Caesar from the early 1st century AD was found. An Ae3 of Valentinian I dating from 364-375 AD (GUAD1141) was found at 35 Cecil Road. On Bristol Road (GUAD194) Roman brick and tile fragments and key were recovered. At the Bristol Road and Stroud Road junction a number of burials (GUAD195) believed to Romano-British in date were found during a sewer excavation. West of Bristol Road a Romano-British terracotta lamp (GUAD197) and a Roman pin (GUAD198) were recovered. Another coin was found at 10 Shakespeare Avenue (GUAD1174). This coin was marked URBS ROMA, dated to 330-335AD, and was struck by Constantine or his successors to reinforce ancient continuity after Constantinople became the centre of the Roman world. Two coins were also found to the east of Podsmead Road. GUAD1193 was a denarius of Domitian dated 80AD and GUAD1179 was an Ae3 of Constantine II dated to 317-337AD.

A watching brief at Hempstead Lane (GUAD1272) revealed a number of 2nd to 4th century coins. An evaluation at Land east of Hempsted Lane (GUAD2244) recovered Romano-British pot and a number of undated ditches which could Roman.

A single Anglo-Saxon find of a girdle hanger (GUAD194) was recovered on Bristol Road along with finds of Roman to post-medieval date.

2.1.3 Medieval Archaeology

There are a number of archaeological records of medieval date in the area surrounding the site. On Bristol Road a medieval pin and a lead bullet were found along with a medieval to post-medieval stone ford (GUAD194). West of Bristol Road further medieval finds were recovered; an arrowhead, pin and finger ring (GUAD198). On Shakespeare Avenue a field observation (GUAD1175) was made of the site of Podsmead Moat showing that in 1952 one side still remained water filled and measured 42m long and 12m wide. Documentary evidence also exists for the Podsmead Moat (GUAD1176).

A watching brief at 258 Bristol Road (GUAD1314) uncovered a large pit of medieval date. An evaluation on land east of Hempsted (GUAD1645) confirmed that ridge and furrow revealed in a geophysical survey was of medieval date. Another evaluation, at Monk Meadow, revealed medieval marshland deposits (GUAD1716). A watching brief on Hempsted Lane (GUAD1894) uncovered a
medieval metalled road surface. At Gloucester Quays a watching brief retrieved medieval finds and structures from test pits (GUAD2012). A further evaluation uncovered medieval pot (GUAD2244) on land east of Hempsted Lane.

Built Heritage
The closest medieval buildings are found within Llanthony Priory to the north of the site and in Hempsted village to the west.

2.1.4 Post-medieval Archaeology
A small number of known post-medieval sites have been recorded in the area around the site. A medieval to post-medieval dated ford was recorded on Bristol Road (GUAD194). At the Bristol Road and Lower Tuffley Lane junction a stone make-up layer and two successive limestone surfaces were recorded, all of post-medieval date (GUAD952). A watching brief at Podsmead Farm recorded the post-medieval rebuilding of the moated farm buildings (GUAD1235). Another watching brief, at Talbot Mews, revealed a pond back-filled with post-medieval furnace waste (GUAD1298). An evaluation at the Bristol Road and Clifton Road junction (GUAD1511) uncovered two linear features, a posthole and two wells all of post-medieval date. The evaluation of land east of Hempsted (GUAD1645) revealed a post-medieval trackway previously recorded in a geophysical survey. A watching brief for the south-west bypass (GUAD1704) recorded a number of post-medieval small furrows, a backfilled brook, three ditches and a spread of post-medieval building rubble. On Hempsted Lane, a watching brief (GUAD1894) uncovered a fragment of 19th century wall. A watching brief at Gloucester Quays recorded post-medieval finds and structures in test pits (GUAD2012).

Built Heritage
The area to the east of the HA21 site contains a large number of post-medieval houses. To the north of the HA21 site a number of listed buildings can be found on Stroud Road. 5 and 7 Stroud Road (NHLE1271785), 13 and 15 Stroud Road (NHLE1271786) and 23 to 33 Stroud Road (NHLE1271787) are all Grade II listed and date to the early 19th century. 155 and 157 Southgate Street (NHLE1245636) are a pair of semi-detached houses dating from around 1835 and Grade II listed. Close to this is the Grade II listed Provender Mill (NHLE1271710) originally built in 1862 but with extensions of the 1890s. This building has recently been seriously damaged by a fire and may need to be completely rebuilt.

Although not listed there are also a number of notable historic buildings in the area within and surrounding the site. In the northern part of the HA21 site is the last surviving building of the Gloucester Railway Carriage and Wagon Works. This structure has a distinctive elevation on Bristol Road of ‘saw-toothed gables’ with blue brick detailing and was constructed in around 1890 to 1900. On the opposite side of the Bristol Road, a little to the south, is the frontage of the former Morelands Match Factory and the adjoining bike shop. Both of these structures were built around 1890 to 1900. The match factory building is distinctive because of its large stone sign above the ground floor windows. The bike shop was originally the end of a terrace of houses and has unique first floor windows with circular brick mullions.

To the centre of the site is a tall chimney that is shown on the 1902 Ordnance Survey map. This brick chimney, the Madleaze Chimney, appears to be octagonal in shape and until recently had a cornice around the top but has now been reduced in height. The historic maps show that it was associated with a timber yard off Price Street.
73 to 91 Bristol Road (NHLE1245993), known as Norfolk Buildings, is a terrace of ten houses built in 1836. They were built for Samuel Lysons to a design of Thomas Fulljames and are ‘an imposing ashlar fronted terrace … intended for prosperous residents’ (Herbert 1988, p224). The streets of brick artisan housing running to the east both north and south of Norfolk Buildings were also developed by Lysons from 1854 and those further south from around 1880-90. Just to the north of Norfolk Buildings is 57 to 67 Bristol Road, known as Victoria Terrace. It is an unlisted terrace of houses dating from around 1870 to 1880 built of red brick, with polychrome brick string bands and pointed arch window and door openings. On the opposite of Bristol Road are 52 to 56 Bristol Road and 58 Bristol Road, all unlisted buildings of red brick but with distinctive features. Numbers 52 to 56 have prominent crow-stepped gables topped with finials whilst number 58 has a central gable and terracotta panels over the first floor windows.

Further south on Bristol Road, on the corner of Lysons Avenue, is the former Bristol Hotel (149 Bristol Road) designed by J Fletcher Trew around 1900. This building, unusual for the area, is brick built with a rendered first floor. It has a ‘rounded, rather oriental, corner tower with projecting eaves and ogee roof; wide rounded entrance arch, recessed bow window with wrought-iron balcony above’ (Verey and Brooks 2002, p507). Close to this is St Stephen’s Church (originally dedicated to St Luke the Less) which was designed in a free-perpendicular style by Walter Planck in 1895 but built to a reduced design in 1898-90 (Verey and Brooks 2002, p457) and was extended to the west in 1929-30.

The 19th century houses running along both the west and east sides of Bristol Road to the south of Cecil Road remain surprisingly intact. On the corner of Tuffley Avenue, at the end of the eastern run of houses, is the Avenue Hotel. This mid to late 19th century building, formerly two houses, is rendered and painted white and has two canted bay windows on its western and southern elevations. A number of the windows contain surviving sashes.

In the southern part of the HA21 site, two buildings run parallel to the canal, along its edge, and may be those mentioned in Pevsner as salt warehouses dating from around 1836 (Verey and Brooks 2002, p507), although they marked on Goad’s insurance plan of 1891 as petroleum stores. To the immediate south of the site is a Grade II listed canal mile post (NHLE1245823) dated to 1827. This is a triangular stone post with a rounded top and incised lettering and numbers.

2.1.5 Modern or Undated Archaeology

Very little evidence of a modern date has been recorded from archaeological work in the area surrounding the HA21 site. On Hempsted Lane, a watching brief (GUAD1272) uncovered a concentration of World War II shrapnel. Medieval deposits were revealed to be sealed by modern deposits during an evaluation on Monk Meadow (GUAD1716). A watching brief for the south west bypass (GUAD1875) uncovered underground petrol tanks of World War II date.

A watching brief at 4 Podsmead Place (GUAD1336) and an evaluation on land east of Hempsted Lane (GUAD2244) revealed undated features. These were features that may have been prehistoric to post-medieval in date but as they contained no artefactual evidence it was not possible to ascribe a date to them.

A number of archaeological investigations in the area recorded non archaeological features. These were GUAD1280, GUAD1294, GUAD1315, GUAD1362, GUAD1365, GUAD1440, GUAD1531, GUAD1583, GUAD1751, GUAD1777, GUAD1802, GUAD1805, GUAD2121 and GUAD2216.
Built Heritage
A large number of modern buildings exist within and surrounding the site. Most of these are not worthy of mention and Pevsner even comments that ‘the south section of Bristol Road presents an appalling 20th century hotchpotch’ (Verey and Brooks 2002, p457). The most prominent modern structure within the area is the tall brick chimney within Mill Place Trading Estate. This structure first appears on maps of the late 1960s and has a square base with an octagonal shaft.

2.1.6 Settings and Key Views
‘The NPPF makes it clear that the setting of a heritage asset is the surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve’ (HE 2015d, p2). Whilst setting is itself not a heritage asset, its importance lies in what it contributes to the significance of the heritage asset.

There are listed and historic buildings within the vicinity of the HA21 site and historic buildings within the site itself. Any development within the site or its surrounding area would have an impact upon these heritage assets.

2.2 History and Map Regression Analysis
The HA21 site is situated in the historic parish of Hempsted and lies between Hempsted village and Podsmead. It lies along the western edge of the Bristol Road and the eastern bank of the canal.

Hempsted can trace its origins to Anglo-Saxon times or earlier. The name ‘Hempsted’ translates as ‘high or hedged homestead or place’ (Baddeley 1913, p81). It is included within the Domesday Survey, in which it is called Hechanestede (Moore 1982, [1],62). The settlement consisted of 20 households in five hides of land with a taxable value of five geld units, which is quite a large amount for only 20 households. Although it did not have a mill it did hold the rights to half a fishery and was able to field three plough teams along with the three Lord’s plough teams. Despite the manor being mentioned in Domesday, this does not mean that it consisted of a number of houses grouped together; it may have been a dispersed settlement that only became a village in later times.

The manor of Hempsted became part of the holdings of Llanthony Secunda Priory, located to the north of Hempsted, in 1141 when it was granted to the Priory by the Earl of Hereford (Herbert 1988, p422). The Priory held the manor until the Dissolution when it passed into private ownership. The manor stood on a moated site (now gone) at Podsmead in the south east of the ancient parish but the village was, and is, located on the south side of the hill at the centre of the parish (Herbert 1988, p423).

The Gloucester and Berkeley Canal (later Gloucester and Sharpness Canal) was begun in 1794, after an Act of Parliament in 1793, but ceased in 1799 with only the main basin and a few miles of the north end dug. The basin was opened to the River Severn in 1812 and work began on the southern part of the canal in 1817. The canal was linked with the Stroudwater Canal in 1820 but work was again suspended between 1820 and 1823. The barge basin was dug in 1825 and the canal was finally completed in 1827. This occasion was ‘marked with appropriate festivity. A convoy of vessels, decorated with flags and streamers and led by a large square rigged ship and a brig, came up the canal while crowds line the banks’ (Herbert 1988, p137). The effect on Gloucester’s economies was immediate because the canal could ‘take ships of up to 600 tons’ and gave Gloucester a role as a ‘supplier of imported goods to Birmingham and a large part of the West Midlands’ (ibid). Further
developments around the basin, the construction of quays, warehouses and more docks, throughout the 19th century.

Industry established itself along the canal sides with coal yards opening up around the basin in the early 1800s. By the 1820s there were 10 coal yards at the basin with more on the quay, all connected by the tramroads that were built in 1809-10. The barge basin was created predominantly for coal barges in 1825. Corn from Ireland rapidly became a principal import and the first of the large brick corn warehouses around the basin was built in the late 1820s to early 1830s. Timber from Canada and the Baltic was another chief import and large timber yards are shown at Baker’s Quay on Causton’s 1840s map. The only consistent export at this time was Droitwich salt, with two salt warehouses being constructed alongside the canal, close to Hempsted Lane, in the 1830s. The timber yards at Baker’s Quay and High Orchard Dock also had sawmills and then creosote production followed for timber preservation. The timber yards expanded south along the canal and Bristol Road along with sawmills and iron works. By the end of the 19th century, historic mapping shows how industrial the area of the site had become.

Historic maps of the area show little detail before the late 19th century. The 1583 Saxton map (Fig 4) shows the River Severn and Gloucester along with Hempsted but there are no roads marked and no detail of the settlements. The 1646 Blaeu map (Fig 3) is very similar. The 1794 Cary map (Fig 4) shows the roads but is really no more detailed than the previous maps. The 1799 Parishes of Gloucester map has the details of individual fields with the northern part of the HA21 site being within ‘Great Madleaze’ and ‘Meadow Madleaze’. The canal can be seen on the 1811 Dawson map (Fig 4) but there appear to be no buildings within the area of the HA21 site. The Ordnance Survey map of 1831 (Fig 4) also shows the canal and the Bristol Road with a small structure in the centre of the area, opposite Hempsted. The 1884 Ordnance Survey (Fig 5) shows that Wagon Works had been built in the north of the area by this time with Slate and Marble Works, Saw Mills and a Rope Walk on the eastern side of the Bristol Road. Saw Mills and Joinery Works had been constructed in the centre of the area along with a timber yard. In the south of the site area a Brick Works had been constructed alongside the canal and the Gloucester Gas Works had been built on the east side of the Bristol Road.

Goad’s 1891 insurance plans show that the northern and central area of the HA21 site is dominated with timber and sawing mills that have even spread to the western side of the canal. A number of companies are recorded on this map, including W Wibby, Thomas Adams and Sons, Price Walker and Co., Ashbee and Son, Booth and Co., to name a few. Timber yards extend into the southern part of the HA21 site but there are also petroleum stores, boat building and oil stores alongside the canal. The 1903 Ordnance Survey (Fig 5) still shows all the timber yards and saw mills in the northern and central parts of the HA21 site. This map shows the railways or tramways that run from the buildings to the canal and that new road has also been built, in the very north of the area of the HA21 site, called Madleaze Road, and on the opposite side of the canal Monk Meadow dock has been constructed. The timber yards have also been expanded by the construction of a large timber pond on the west side of the canal. On this map, the southern part of the HA21 site contains few buildings although a dry dock and a boat house can be seen. The houses on the east side of Bristol Road have increased by this time with a number of new streets being laid out at 90 degrees to Bristol Road. On the west side of Bristol Road, within the footprint of the HA21 site, a number of short rows of houses can be seen interspersed with the industrial buildings.

Expansion of this industrial sector alongside the canal can be seen on the 1920s Ordnance Survey (Fig 5) along with the continued expansion of the housing to the east of Bristol Road. The northern
part of the site retains its use as timber yards and saw mills. The industrial expansion has also carried over the Bristol Road with a match factory, engineering works and tram depot shown on the map in the northern. Further south, also on the eastern side of the Bristol Road, a chemical works has been constructed adjacent to the railway line. To the south of Hempsted Bridge, a number of Boat Houses can be seen within the HA21 site and on the west side of the canal the Standard Match Factory has been constructed close to the bridge. A little further south within the site, a Concrete Works has been constructed and in the very south of the site a Timber Yard and Saw Mill have also been built. Alongside the canal a ‘Travelling Crane’ is marked on the map at this point.

By the time of the 1930s Ordnance Survey (Fig 5) expansion of the housing on the east side of Bristol Road has extended almost as far south as Hempsted Bridge. The timber pond on the west side of the canal is shown as partly filled in and to the north of this, around Monk Meadow Dock, a large number of industrial buildings have been constructed although their function is not marked. It is recorded that storage depots for petroleum were built along the canal, including at Monk Meadow Dock, from the late 1920s (Conway-Jones, p128). The buildings shown on the map at Monk Meadow Dock must be petroleum storage structures. Just to the north of Hempsted Bridge, on the east side of Bristol Road, a new engineering works is marked on the map along with extensions to the chemical works to the south. The Standard Match Factory, on the west side of the canal, has been greatly extended by this time and to the east of the Bristol Road in the very south of the HA21 site a number of houses within their own strip plots have been constructed. A little further east of these houses a new ‘Ladder Works’ has been constructed.

The 1942 Land Utilisation Survey shows the whole of the HA21 site, and much of the adjoining land, coloured red. This signifies that the land is ‘so closely covered with houses and other buildings or industrial works as to be agriculturally unproductive’. Although the map also shows that meadow land runs right up to the edge of the HA21 site at places in the south of the area. The 1950s Ordnance Survey (Fig 5) shows little change of substance within the northern part of the HA21 site. Many of the industrial buildings have been consolidated into large structures instead of a number of smaller buildings close together. To the west of the canal, the timber pond has further silted up and the petroleum storage around Monk Meadow has increased. Along the eastern side of the Bristol Road a number of engineering works can be found interspersed within the houses and larger works can be found to the south of the houses. The area to the immediate south of Hempsted Bridge can be seen to be more built up, including a boat house, social club and oil storage depot with a builder’s yard and another depot on the eastern side of Bristol Road. The gas works close to the south of the HA21 site has expanded hugely to the east by this time and to the south of the site can be seen further industrial buildings spreading northward from outside the area of the site.

By the time of the 1960s mapping, some of the areas of the HA21 site were being cleared and some have had all structures demolished and replaced with new buildings. The area of housing to the east of the Bristol Road, however, remains unchanged. Current mapping shows that the clearing and replacing of buildings has continued into the present. The biggest change in the area surrounding the HA21 site is the expansion of the housing on the west side of the canal. The village of Hempsted has expanded so much that the houses now reach the canal edge in the north and central part of the area, no doubt partly because of the new road running from the south of site, where it crosses the canal, northwards past Hempsted.

2.3 Potential for Further Assets

The HA21 site runs along the side of the canal and will have been subject to some earth moving
which may have compromised any possible archaeological evidence along with the 19th century and later buildings that have been built within the HA21 site boundary. However, with a large number of Roman finds being recovered to the north, east and west of the HA21 site and medieval archaeology being recovered from within the site it is likely that there will be further archaeological evidence to be found within the site itself.

3. Significance

3.1 Intrinsic interest of the site
The area of the HA21 site is of interest because of the possible archaeological evidence that may exist within the site. The industrial ‘saw-toothed gabled’ building in the very north of the HA21 site is also of interest as the last surviving building of the Gloucester Railway Carriage and Wagon Works and as a surviving late 19th century industrial structure. In the southern part of the site, close to the Hempsted Bridge, are the two possible salt warehouses dating from 1836. These are of interest as surviving warehouse buildings of the early to mid 19th century.

3.2 Relative importance of the site
There are no designated heritage assets within the HA21 site and it therefore holds little national importance. Although there are a number of listed buildings and a scheduled monument within the vicinity of the site, none of them are associated with the site itself. A number of undesignated heritage assets have been identified within the site, including early 19th century warehouses and a late 19th century industrial building. Further undesignated heritage assets are likely to be within the boundary of the site and detailed building assessment would be required to identify them. All of the undesignated heritage assets should be protected from development.

3.3 Physical extent of important elements
The physical extents of upstanding structures within the HA21 site include the former Gloucester Railway Carriage and Wagon Works building and the possible former salt warehouses. It is possible that within the mix of buildings on the HA21 site other historic structures have survived and a detailed building assessment would be required to identify them. All the undesignated heritage assets should be protected from development.

The physical extent of buried features on the site cannot be identified because any archaeological features that could exist have yet to be investigated.

4. Impact of Development of Site

4.1 Assessment Criteria
The NPPF (DCLG 2012) policy on harm to heritage assets is set out in paragraphs 132 to 134. This is further discussed in the NPPG (NPPG 2014) in paragraph: 017 (Reference ID: 18a-017-20140306) and paragraph: 018 (Reference ID: 18a-018-20140306) of the section on ‘Conserving and Enhancing the Historic Environment’. The impact assessment table below has been produced with reference to these policies and guidance.

The site historic environment assessments will consider the impact of development for the allocation sites and will use the criteria cited in the following table.

| Major | Demonstrable improvement to a designated heritage asset of the highest order (or its |
Enhancement

Demonstrable improvement to a designated heritage asset (or its setting), or non-designated asset (or its setting) of interest such that the level of improvement will demonstrably have a minor affect on the area and its heritage resource, either at a local or regional level. For instance grade II listed buildings, Conservation Areas and undesignated heritage assets important at a sub-national level.

Neutral

Impacts that have no long-term effect on any heritage asset.

Minor Harm

Minor harm to a designated heritage asset (or its setting), or non-designated asset (or its setting) of interest such that the level of harm will demonstrably affect the area and its heritage resource, either at a local or regional level. For instance grade II listed buildings, Conservation Areas and undesignated heritage assets important at a sub-national level.

Moderate Harm

Minor harm to a designated heritage asset (or its setting) of the highest significance or non-designated asset (or its setting) of interest of demonstrable significance equal to that of a scheduled monument. For instance scheduled monuments, grade I/II* listed buildings, grade I/II* registered parks and gardens, registered battlefields, protected wrecks or World Heritage Sites.

Major Harm

Harm to a designated heritage asset (or its setting) of the highest significance, or non-designated asset (or its setting) of interest of demonstrable significance equal to that of a scheduled monument. For instance scheduled monuments, grade I/II* listed buildings, grade I/II* registered parks and gardens, registered battlefields, protected wrecks, World Heritage Sites or harm to a building or other element that makes a positive contribution to the significance of a Conservation Area as a whole.

Substantial Harm

Substantial harm to, or loss of, a designated heritage asset (or its setting), or non-designated asset (or its setting) of interest such that the level of harm or loss will demonstrably affect the area and its heritage resource, either at a local or regional level. For instance grade II listed buildings, Conservation Areas and undesignated heritage assets important at a sub-national level.

Unknown

Where there is insufficient information to determine either significance or impact for any heritage asset, or where a heritage asset is likely to exist but this has not been established, or where there is insufficient evidence for the absence of a heritage asset. For instance where further information will enable the planning authority to make an informed decision.

4.2 Assessment of Harm

4.2.1 Archaeology

Should development within the HA21 site go ahead, given the nature of modern development, the depth of foundations and drainage, it is likely that any archaeology would be removed as a result of the development. The impact upon the unknown archaeological remains suspected to survive within the site cannot be quantified in detail however given the likelihood of archaeology existing on the site
and the requirements of modern development, any proposals for the site would have an impact upon this archaeology causing partial or complete loss. This would cause **Moderate Harm** to heritage assets.

4.2.2 **Built Heritage**

Any development within the HA21 would have a detrimental impact on the historic buildings existing within the site. It is possible that development would require the complete clearance of the site and as such this would cause **Major Harm** to the heritage assets. Should a development require conversion or alteration of the historic buildings this would cause **Minor Harm** to the heritage assets.

4.2.3 **Settings**

To the north and east of the HA21 site are a number of listed buildings which would be affected by any development within the site. The whole area is currently industrial in nature and a number of the listed buildings look out upon the industrial estates within the HA21 site. Sympathetic development within the site would be an **enhancement** of the area and would have a positive effect upon the settings of the listed buildings. However, development as an industrial or retail park would have the opposite effect on the listed buildings and would cause **Minor Harm** to the heritage assets.

4.3 **Improvements and Enhancements**

Retention and incorporation of all of the historic buildings within the HA21 site, including, but not exclusively, the former Gloucester Railway Carriage and Wagon Works building and the possible former salt warehouses would be an **enhancement** to the area. Removal of the rundown and mid to late 20th century industrial buildings would an **improvement** to the area.

5. **Planning Requirements**

Any application for this site should be supported by a description of the significance of heritage assets likely to be affected by the proposed development. In the first instance applicants should provide a desk-based assessment describing the archaeological potential of the site.

Should the assessment indicate that the proposed development has the potential to conflict with buried archaeological remains, then there will be a need to undertake an archaeological evaluation (trial trenched supported by geophysical survey) to investigate in detail the presence/absence, character, significance and depth of archaeological remains within the site.

Should the assessment indicate that the proposed development has the potential to conflict with built heritage elements, then there will be a need to undertake built heritage assessment (proportionate to the significance of the heritage asset) to investigate in detail the character, history, dating, form and archaeological development of the specified structure on the site.

An assessment of the setting of the near-by listed buildings should be undertaken in relation to a known scheme of development and should include a Zone of Visual Influence (ZVI) or Zone of Theoretical Visibility (ZTV) assessment in accordance with Historic England guidance *The Setting of Heritage Assets* (HE 2015d). These could be included within a built heritage assessment.

Reports outlining the results of each stage of work will need to be submitted in support of the application. This is in accordance with paragraph 128 of the NPPF (DCLG 2012) and policies BE.32 and BE.33 of the Second Stage Deposit Draft of the Gloucester Local Plan 2002 (GCC 2002).
A design and character assessment would need to be produced in order to provide information on heights, massing and scale of the proposed development. This is in accordance with paragraphs 61, 64 and 131 of the NPPF and policies BE.7 and BE.22 of the Second Stage Deposit Draft of the Gloucester Local Plan 2002 (GCC 2002).

6. Minimising Harm

Should any development be proposed, then a number of actions are recommended to mitigate the impacts identified above.

- The buildings of the former Gloucester Railway Carriage and Wagon Works, the possible salt warehouses and the two chimneys should be retained and put forward for inclusion in the forthcoming Local List along with any other structures identified in a detailed built heritage assessment.
- The buildings within the HA21 site should be assessed with an initial built heritage assessment followed by, if necessary, building recording of all historic structures. Both should be produced in line with relevant guidance produced by the CIfA (CIfA 2014e) and Historic England (EH 2006).
- Retention of all historic structures, as identified by the built heritage assessment and building recording, including putting forward the structures for inclusion in the forthcoming Local List.
- Desk-based assessment of the site, in line with relevant guidance produced by the CIfA (CIfA 2014f) and Historic England (EH 2010).
- Geophysical survey of the site, in line with relevant guidance produced by the CIfA (CIfA 2014d).
- Evaluation trenches to identify any possible buried archaeological remains followed by, if necessary, excavation in advance of development or watching brief during construction, in line with relevant guidance produced by the CIfA (CIfA 2014a; CIfA 2014b; CIfA 2014c).
- Setting of close listed buildings to be appraised. The appraisal could be included within a built heritage assessment, in line with relevant guidance produced by the CIfA (CIfA 2014e) and Historic England (EH 2006).
- Full reporting and publication of all results.
- The design of any development should take into account the style and design of the many 19th century buildings along the eastern side of Bristol Road.
- Any development should preserve, and where possible, enhance the character and setting of the close listed buildings.
- Preservation of setting of designated assets should be achieved by, for example, screening or tree planting.

The scope and specification of any works would be agreed with the Gloucester City Archaeologist and the Principal Conservation and Design Officer.

7. Recommendations

The criteria used for the recommendations are detailed in the table below.

<table>
<thead>
<tr>
<th>Development allowed</th>
<th>Development can go ahead with no mitigation subject to planning approval of proposals and designs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development Allowed - mitigation programme</td>
<td>Development can go ahead but following a stage or number of stages of mitigation designed to alleviate the impacts of any proposal. Also subject to planning approval of proposals and designs.</td>
</tr>
<tr>
<td>No development</td>
<td>No development within this area.</td>
</tr>
</tbody>
</table>

The recommendations are mapped on Figure 6.

The January 2015 SALA report (GCC 2015a) includes the HA21 site and describes it as ‘retain as employment land’ and ‘multiple ownerships and therefore are not available or achievable’ (ibid, Appendix 2). Should the site be approved for development for residential, business or industrial use then certain areas of the site would need to be left free of development and some would involve mitigation from the impacts identified above.

8. Conclusion

This assessment has looked at the heritage assets within and in the area of the HA21 and discussed the past and present uses of the site. It has looked at the potential for unknown heritage assets to exist within the site and whether they would be at risk of harm from a development. It is considered that development on the HA21 site could be delivered without significant impact on the heritage assets of the site provided that the actions proposed to minimise the impacts of development, as detailed above, are followed.

Taking into account the impacts discussed and the recommendations to avoid harm to the heritage assets, of the 25.29 hectares of the site, a total area of 1.63 hectares would be unavailable leaving an area of 23.85 hectares available for development although this figure may drop following a built heritage assessment of the site area. This figure is indicative only – the final extent of mitigation will need to be agreed in consultation with the City Archaeologist and Principal Conservation and Design Officer.
